About the Project

The Valley Metro Operations and Maintenance Center (OMC) was built in 2006 to store and maintain a fleet of 50 light rail vehicles. The light rail vehicles are used to operate the current 28-mile Valley Metro rail system. With expansion to a 66-mile system by 2034, new vehicles will be added to the fleet and additional space is needed at the OMC to properly operate and maintain them.

Construction for additional space will include expanding various maintenance buildings, adding five new storage tracks, and adding new service and cleaning facilities. The expansion will allow the OMC to operate and maintain a fleet of approximately 90 vehicles. Construction will be phased to ensure operations and maintenance of the current light rail system is unaffected.

PROJECT STATUS

• Construction is underway to:
  • Expand two existing buildings.
  • Excavate, transport and compact dirt to prepare for wall construction.
  • Extend existing drainage structures.
  • Continuing coordination with stakeholders.

NEXT STEPS

• Construct foundations for two additional buildings.
• Start remodel construction inside existing buildings.
